Leadyol

FOR MARKETING AGENCIES AND LEAD-GENERATION FREELANCERS

Find new clients for your agency, and build prospect lists for your clients, under your own brand

Pick an industry and a city. Leadyol lists the businesses there, visits each one's website for e-mails, phones, WhatsApp links and social profiles, cleans everything and hands you an Excel file. Use it for your own prospecting, and run a separate workspace for each client, with your name and logo on the app and on every file.

Paid once: no credits, no monthly fee

10 computers · $299 once

One workspace per client

No map scraping: open, licensed data

Works with ChatGPT & Claude

WHY AGENCIES CHOOSE LEADYOL

Built for agencies that sell to businesses

◎

Find the businesses that need you

"Restaurants in Dubai without a website." "Clinics in Istanbul with no Instagram." Filter by *has website / phone / e-mail*, and every line of your list is a pitch waiting to happen.

$

Paid once, not every month

Most lead tools charge per credit or per month. Leadyol is a one-time licence with unlimited searches, lists and exports. The business data is open and free, so there is nothing to top up.

★

Your brand everywhere

Your agency's name, logo and colours on the app and on every export. Remove "Powered by Leadyol". Your clients see your tool, not ours.

▤

A workspace for each client

Each client gets their own lists and their own do-not-contact list. Exports are named after the client, with "Prepared for [client] by [your agency]" on them.

AI

Your AI assistant does the searching

Ask Claude, Codex or Cursor in plain words: "Find gyms in Riyadh with an e-mail and export them to Excel." The assistant runs Leadyol for you.

✓

Clean, and it keeps working

No browser robots copying map websites, so there are no captchas, no blocked connections, and nothing that breaks when a map website changes a page. Leadyol starts from open data published for reuse.

TWO WAYS TO USE IT

Grow your own agency, and serve your clients with the same tool

1 · Prospecting for your agency

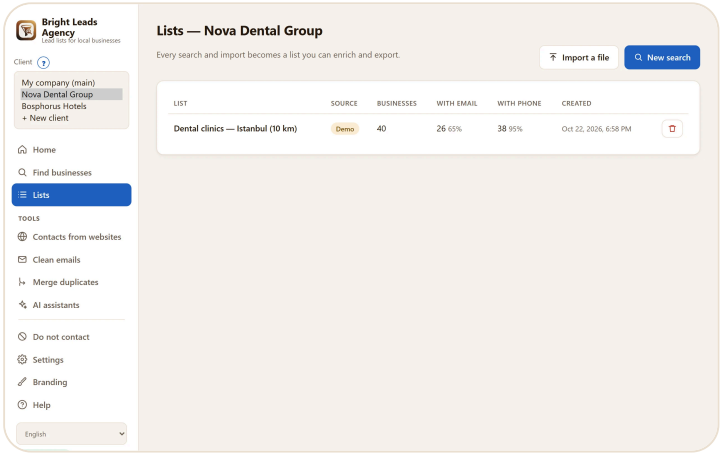

- List every business in your target city and sector: dentists, salons, restaurants, real estate agents, gyms…
- Filter the ones with **no website, no Instagram or no e-mail**: your next web design, social media and ads clients.
- Reach each one the way it can be reached: the phone and social profiles come with the open data, and for businesses that have a website, Leadyol adds the e-mails, WhatsApp links and profiles published there.
- Export to Excel and start calling or writing the same day.

2 · Prospecting as a service for your clients

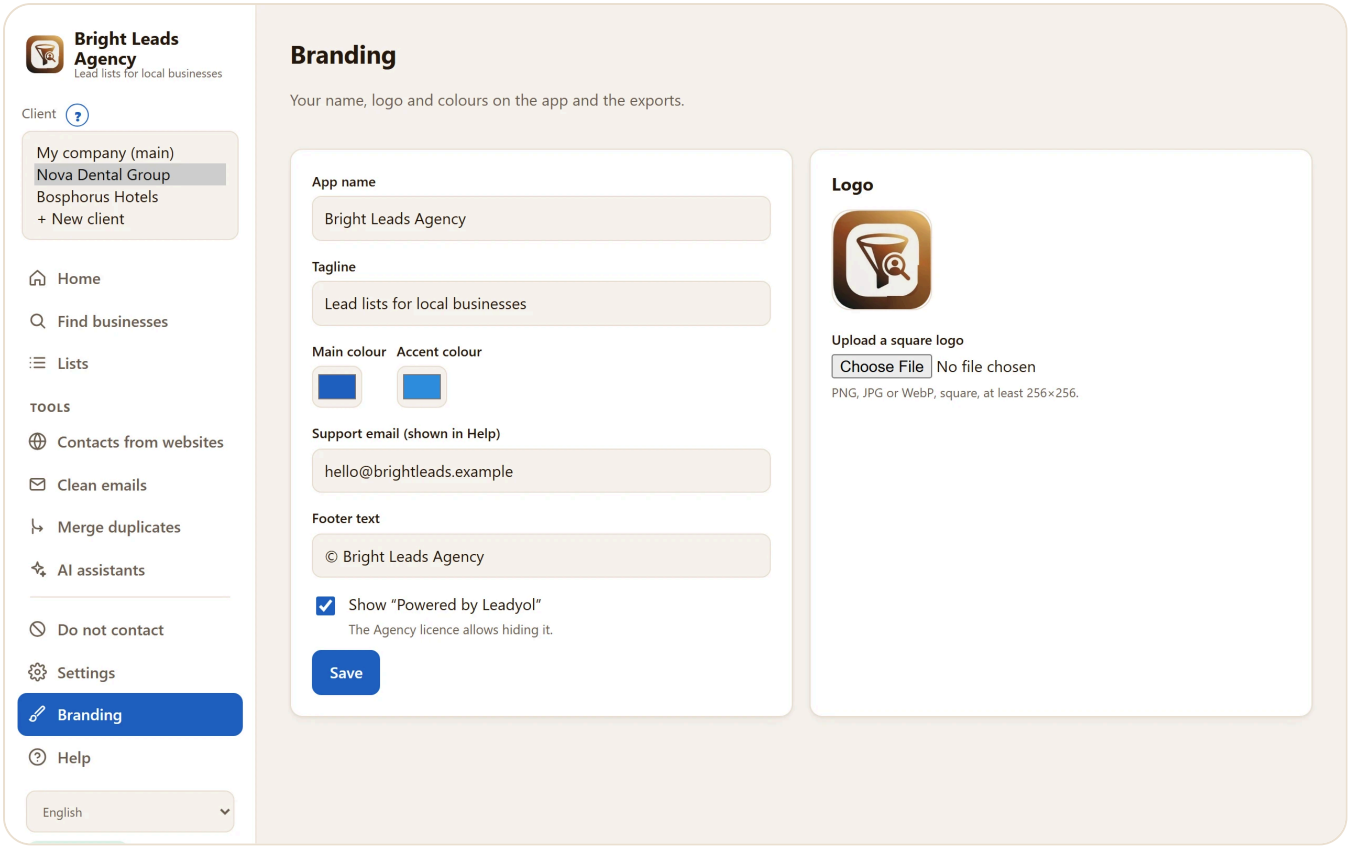

- Your client sells to businesses: a B2B supplier, a clinic group, a software company, an exporter.
- In their workspace, you build the lists they need: country by country, city by city, sector by sector.
- You clean them, check the e-mails, apply their do-not-contact list, and deliver an Excel file with your brand.
- Add it to your services: monthly prospect research, a list before a trade fair, a market study of a new city.

One client, one workspace

Pick the client in the menu: their lists, their imports and their do-not-contact list, nothing mixed. Add a new client in one click. Install it on your team's computers: the licence covers up to 10.

Client workspaces: each client has its own lists.

Branding: your name, logo and colours on the app and the exports, and “Powered by Leadyol” hidden.

WHAT YOU CAN DO

Everything between “who should we call?” and a list you can use

Search the world

About 1,800 business categories, the popular ones searchable in English, French, Turkish and Arabic. Search around a city, a region, a whole country (region by region) or several countries at once. Results appear while the search runs.

Website contact finder

Leadyol visits each business’s own website, politely (it follows robots.txt), and collects e-mails, including addresses hidden from simple copy-paste, phones, WhatsApp links and profiles on Facebook, Instagram, LinkedIn, TikTok, YouTube, X and Telegram.

E-mail cleaner

Typos fixed, broken and throwaway addresses removed, duplicates merged, and every e-mail domain checked to see that it can receive mail. Shared inboxes (info@, contact@) are marked apart from named people. Fewer bounces, a safer sender reputation.

Bring any list

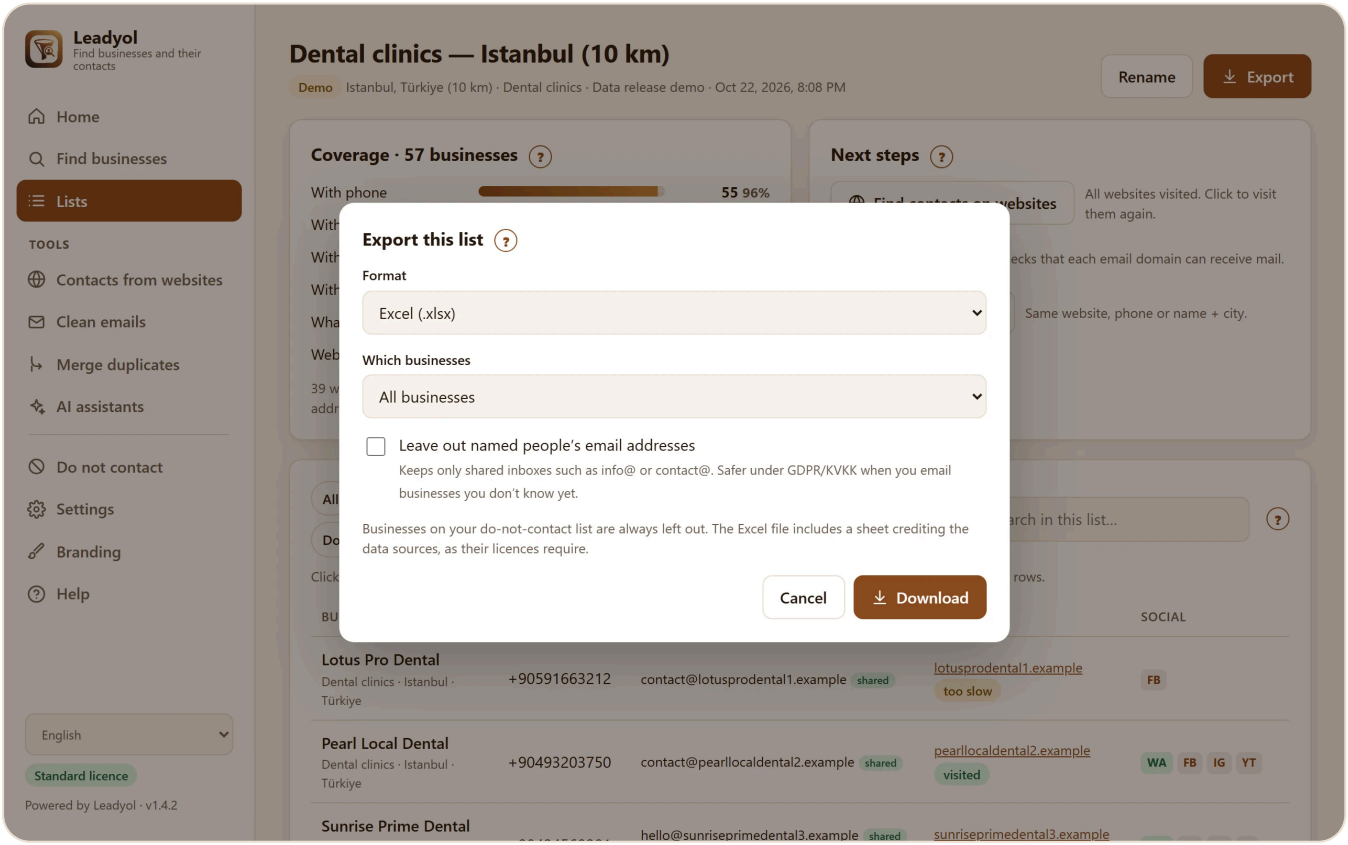

Trade-fair exhibitors, a directory, an old CRM export: paste the websites or upload an Excel/CSV file. Leadyol matches the columns, visits each site and fills in what’s missing. Merge several files into one list without duplicates.

Ready-to-use Excel

One column per channel, a click-to-chat link for one-to-one contact, the source and the date collected on every line, and an “About this data” sheet. You can also leave out named people’s addresses and keep only shared inboxes, safer under GDPR and KVKK.

A do-not-contact list that never forgets

When someone asks not to be contacted, add them once. They are left out of every future export.

Export: Excel or CSV, do-not-contact list always applied, data credits included.

YOUR AI ASSISTANT

Build your clients' lists by asking Claude or Codex

Leadyol includes an MCP server. Connect your AI app in one click from the **AI assistants** page, then ask in your own words. The assistant searches, filters, removes duplicates and saves the Excel file, with your licence and your do-not-contact list.

ChatGPT · Claude Desktop · Claude Code · Codex · Cursor · VS Code · Gemini CLI · Windsurf · LM Studio

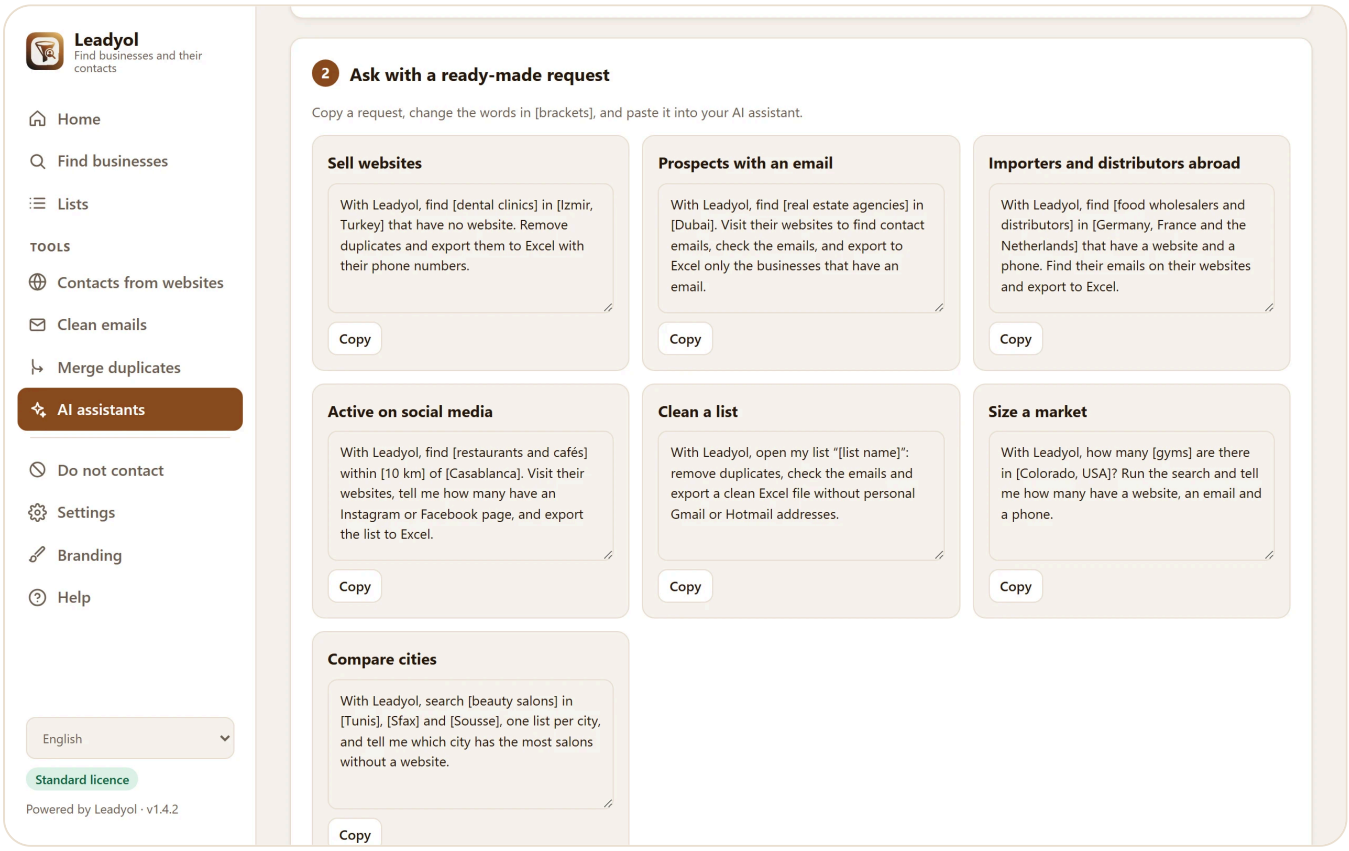

```
› Find dental clinics in Izmir without a website and export them to Excel.
```

```
› How many beauty salons are there in Paris, and how many have an e-mail?
```

```
› Find olive-oil importers in Germany and France, with their e-mails.
```

```
› Build a list of real estate agencies in Doha for my client Gulf Homes.
```

You use ChatGPT? Turn on the **ChatGPT connector** in Leadyol and paste its private address into ChatGPT (Developer mode, on a paid ChatGPT plan). Or use **Codex**, OpenAI's app for your computer, with your ChatGPT plan. Claude Desktop and Claude Code work with your Claude plan, and Gemini CLI with a free Google account. Leadyol adds no AI cost, and ready-made requests are inside the app.

AI assistants: connect in one click, then copy a ready-made request.

REAL NUMBERS

What the open data holds

From a test run on the open data, before any website visit. Leadyol's website step adds more e-mails and social profiles on top.

902

dental clinics in Dubai and Abu Dhabi

95% with a phone
94% with a social profile
69% with an e-mail

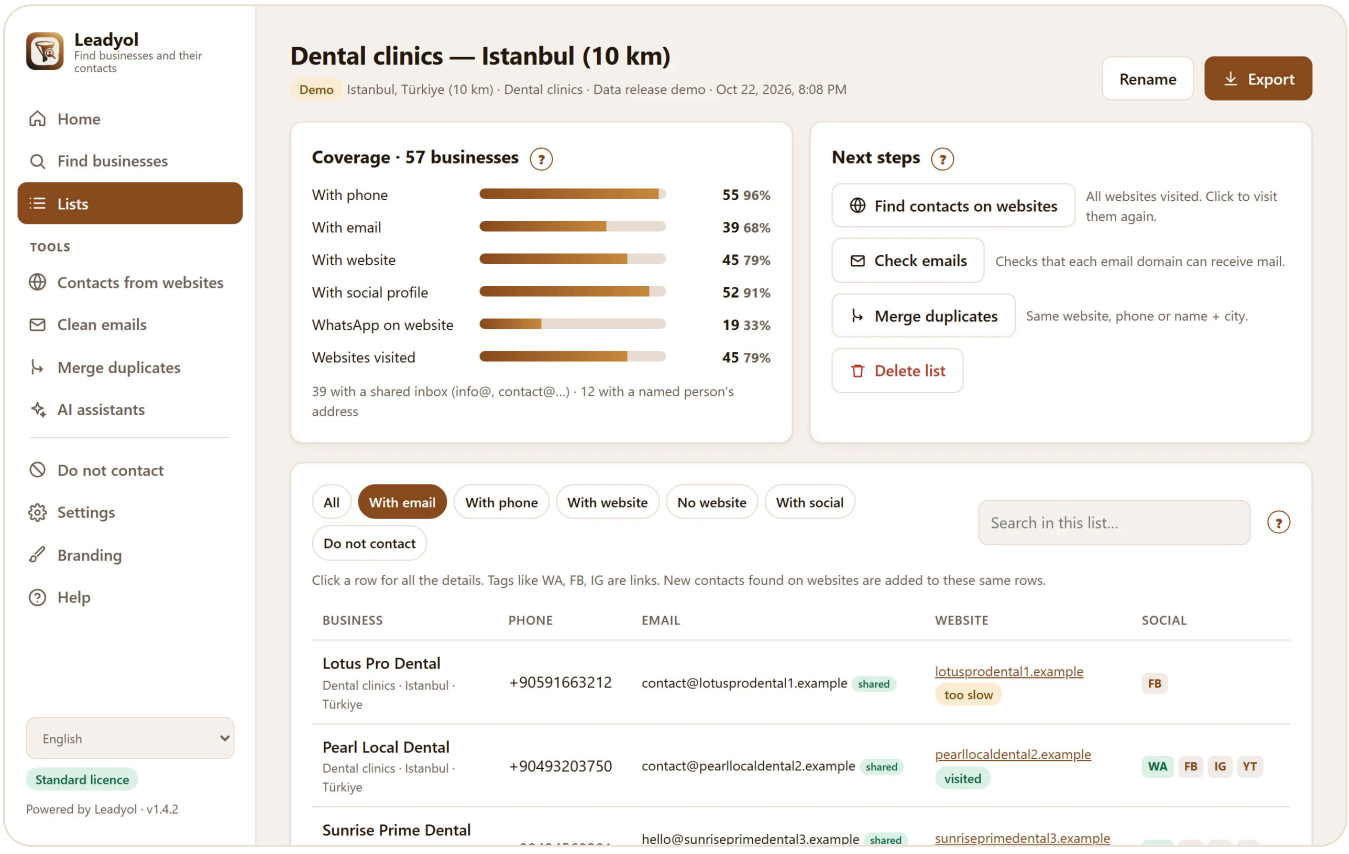

7,504

beauty businesses in Delhi

92% with a phone
93% with a social profile
51% with an e-mail

Always the newest data. The open data gets a new release about every month. Leadyol checks for it by itself, and every new search uses the latest release: nothing to download or update. To refresh an older list, run its search again.

Figures from the September 2026 release. Coverage differs by country and sector, and some listings will have closed. Leadyol shows how complete each list is before you export it.

Every list shows its coverage first: phones, e-mails, websites, social profiles, WhatsApp.

THE CLEAN WAY

Why it keeps working when other tools break

Most lead tools copy listings out of map websites by driving a browser. That goes against those websites' terms, stops working when their pages change, and can get your connection blocked. Leadyol starts from open data published for reuse, then reads only what each business chose to put on its own website.

	Scraper tools	Leadyol
Where the list comes from	Copied from a map website	**Open, licensed data**
When the website changes its page	Breaks until an update	**Keeps working**
Captchas and blocked connections	Common	**None from the data source**
Contact details	Often just a phone	**E-mails, WhatsApp, 7 social networks**
Opt-out handling	None	**Built-in do-not-contact list**

EVERYTHING INCLUDED

All of this in one Agency licence

Search

- About 1,800 categories, in 4 languages
- City, region, country or several countries
- Filters: quality score, has website / phone / e-mail
- Live results while the search runs
- Always the newest open-data release, picked up by itself

Contacts

- E-mails, phones, WhatsApp links
- Facebook, Instagram, LinkedIn, TikTok, YouTube, X, Telegram
- Skips booking and directory platforms, so you get the business's own details

Cleaning

- E-mail typos, throwaway and broken addresses
- Mail check on every domain
- Duplicates merged across files
- Do-not-contact list on every export

Agency

- Up to 10 computers
- A separate workspace for each client
- Your name, logo and colours on the app and exports
- "Powered by Leadyol" removed
- Exports named "Prepared for … by …"
- Priority e-mail support

AI and tools

- MCP server for Claude, ChatGPT, Codex, Cursor and 5 more apps
- Tools: find contacts on websites, clean & check e-mails, merge duplicates
- Import CSV / Excel with automatic column matching
- Connections: new lists go to Google Sheets or your CRM through Zapier, Make or n8n
- Use it on your phone over your office Wi-Fi (password-protected)

Setup and help

- Windows, Mac or Linux; your data stays on your computer
- App in English, French, Turkish and Arabic, dark mode, phone layout, optional password
- "?" help on every screen, short videos for each tool, a 5-minute setup video
- 1.x updates included

THE BUSINESS MODEL

Turn a one-time $299 into monthly revenue

You pay Leadyol once. Your clients pay you every month for a prospecting service they understand: "every month, we research your market and bring you new businesses to contact, checked and ready."

THE SERVICE YOU OFFER	EXAMPLE PRICE
Market mapping: the client's target sectors and cities researched, e-mails checked, ready to contact	**$150–300 once**
Monthly prospect research: new sectors or cities, cleaned, the client's opt-outs removed	**$100–250 / month**
Example: you charge only 4 clients $150 per month for this service	**$600 / month**
Your Leadyol cost for those clients	**$299 once**

> Many agencies charge even more for prospecting. Example prices only: you set your own. You charge for your work, research and cleaning, done for each client; the results stay that client's own prospect research, not a database sold to anyone who pays.

Other ways agencies use it: a free "missing website" audit of a city to win web-design projects, prospect research before each trade fair or business trip, a market report for a client moving into a new city or country.

More than 10 computers, or several branches?

Write to us and we'll make you a licence that fits.

GET STARTED

From trial to your first client list

1

Try it free for 7 days

No card. Your key arrives by e-mail: 10 searches and 5 website-contact runs, with Excel export.

2

Build your first list

One sector, one city. The 5-minute setup video shows every step.

▶ Watch the setup video

3

Buy Agency, keep everything

Buy with the same e-mail and your lists stay where they are. 14-day money-back guarantee, no questions asked.

ALSO FROM US

Want to answer your clients' customers too? Meet Workyol

Workyol is our app for agencies that run WhatsApp, Instagram and Messenger for their clients: official WhatsApp campaigns to customers who opted in, auto-replies, one inbox and scheduled posts. Also paid once, also for 10 clients.

Kept apart on purpose: Leadyol lists are for your own one-to-one prospecting by e-mail or phone, never for WhatsApp campaigns. Workyol only messages people who agreed to receive messages.

FAQ

Questions agencies ask

▼ Can I do prospecting for my clients and charge for it?

Yes. The Agency licence is made for that: you research and build prospect lists for each client, in their own workspace, with your brand, and you charge for that work. What isn't allowed is selling lists as a database product (the same file to anyone who pays). The exports include the credits that the open data licences ask for.

▼ Is it legal? What about GDPR?

Leadyol collects business contact details that companies publish themselves. How you use them is your responsibility: in the EU and UK, B2B outreach usually relies on "legitimate interest", which means a relevant offer, saying where you found the contact, and honouring every opt-out. Leadyol records the source and date of each contact and keeps a do-not-contact list to help you do that. Some countries have stricter rules for e-mail; check yours.

▼ Where does the data come from?

From open datasets published for reuse, including commercial use: the Overture Maps Foundation places data, Foursquare Open Source Places and OpenStreetMap. Contact details are then read from each business's own public website.

▼ Can I send WhatsApp campaigns to the numbers?

No. WhatsApp only allows businesses to message people who agreed to receive messages, and bulk messages to strangers get numbers banned. The click-to-chat link is for contacting one business at a time, personally.

▼ How many results will I get?

It depends on the country and the sector. Big cities in Europe, the Americas, the Gulf and Asia are well covered; smaller towns in some countries less so. The app shows how complete each list is.
